

**Job Title:** Software Developer Intern.

**Department:** Information Technology.

**Job Type:** Internship.

**Location:** New Haven, Connecticut.

**Job Description:**

We at go4biz.com are seeking an individual who shall be involved in our web development team. The individual will be responsible for creating, modifying and maintaining our clients' websites. The individual must be able to work within the core team and must be able to understand the business requirements and product content within the given time phase and budget.

**Responsibilities:**

- Helping in producing prototypes, and style the website.
- Write, build and maintain code for web applications working with both back-end and front-end technologies.
- Participation in new business activities e.g. estimating level of complexity and providing timing needed to complete projects.

**Required Skills:**

- Candidate should have knowledge in HTML, Java Script, XML, CSS.
- Experience in developing front and back end code for website building.
- Experience in using Joomla templates or any other content management system.
- Strong understanding of creating user experience design is a plus.
- Efficient communication skill.
- Must be enrolled into masters with Computer Science concentration.
- Must be able to communicate with internal teams and clients.
- Previous working experience as a developer is a plus.
